

MUHAMMAD UZAIR

Cybersecurity Enthusiast | Defensive Security & Compliance Focus | Client-Facing Communicator

[LinkedIn](#) | uzair.jay21@gmail.com | Karachi, Pakistan | [GitHub](#)

PROFILE

Final-year Software Engineering student with hands-on experience in SQL, Python scripting, and IT support workflows. Actively building hands-on cybersecurity capability across defensive security, compliance, and foundational offensive security. Currently completing a cybersecurity internship centered on lab-based network defense, building attacker/target environments, running Nmap reconnaissance, analyzing traffic in Wireshark, and mapping findings to MITRE ATT&CK. Backed by the Google Cybersecurity Professional Certificate (NIST CSF, risk management, network security) and a government-backed CEH Foundation program. Proven client/audience-facing communicator through independently designing and delivering a full security curriculum to an international, non-technical audience. Self-starter who builds things (home labs, courses, cloud environments) before being asked to.

CORE STRENGTHS

- **Self-Starter / Bias to Action:** built a personal Azure security lab and a Kali/Metasploitable2 home lab unprompted, ahead of formal coursework
- **Client-Facing Communication:** designed and delivering a 9-session live course to an international, non-technical audience - approved and praised by program leadership
- **Analytical & Curious:** comfortable deep-diving into new tools (Nmap, Wireshark, Sentinel) and frameworks (MITRE ATT&CK, NIST CSF) without hand-holding
- **Work Ethic & Responsibility:** juggling a full course load, a paid-track certificate, and weekly internship deliverables against fixed deadlines.

CYBERSECURITY EXPERIENCE

Cybersecurity Intern | Code Crypticals (Remote, Unpaid)

July 2026 - Present

- Built a full home lab environment in VirtualBox with Kali Linux and Metasploitable2, configuring attacker and target machines and validating boot and network setup end-to-end - direct groundwork for offensive security and APT emulation work
- Performing network reconnaissance with **Nmap** (host discovery, port scanning, service and OS detection) and traffic analysis with **Wireshark** (packet capture, protocol identification)
- Researching and documenting findings against **CVE**, **CVSS**, and the **MITRE ATT&CK framework** to connect technical scan results to real-world threat classification

Cybersecurity Instructor | Edvora Tech (Remote)

July 2026 - Present

- Independently designed a complete 9-session security awareness curriculum from scratch - syllabus, content, and assessments for an audience with no prior security background
- Delivering live instruction on digital safety, account security, and AI-driven threats (deepfakes); proposal formally reviewed and approved by Edvora leadership, praised for depth and structure
- Practiced translating technical security concepts for non-technical audiences — the same skill needed to explain findings to clients in a customer-facing security role

CERTIFICATIONS & Training

Google Cybersecurity Professional Certificate | [Github](#)

June 2026 - Present

Coursera (via InnoVista LearnEasy Skills)

In Progress - 3/9 Complete

- **Course 1: Foundations of Cybersecurity** - CIA Triad, CISSP domains, threat history, analyst toolkit
- **Course 2: Play It Safe: Manage Security Risks** - NIST CSF, SIEM tools, playbooks, SOC analyst workflows
- **Course 3: Connect and Protect: Networks & Network Security** - TCP/IP & OSI models, firewalls, VPNs, network segmentation, DoS/DDoS attacks, packet analysis, IP spoofing, OS & cloud hardening, NIST CSF incident response
- **Course 4: Tools of trade: Linux & SQL** - (in progress, 70% completed)

Certified Ethical Hacker (CEH) - Foundation

March 2026

NAVTTTC

Karachi, Pakistan

- Covered core ethical hacking concepts including XSS, SQL injection, reconnaissance, and vulnerability assessment

Gov. Sindh Initiative for Web 3.0, Agentic Ai, and Cloud Computing

2024 - Present

- Structured program covering AI fundamentals, agentic systems, and cloud computing pathways

TECHNICAL SKILLS

- **Security Domains:** Defensive Security (Endpoints, Network, Cloud) · Compliance & Data Security · Offensive Security fundamentals (recon, vulnerability assessment)
- **Tools:** Nmap, Wireshark, Kali Linux, Metasploitable2, Burp Suite (intro), VirtualBox
- **Frameworks & Concepts:** NIST CSF, MITRE ATT&CK, CVE/CVSS, CIA Triad, Risk Management, Incident Response, Vulnerability Assessment
- **Networking:** TCP/IP, OSI Model, DNS, DHCP, HTTP/HTTPS, Subnetting, Public/Private IP, Firewalls, VPNs
- **Operating Systems:** Windows, Linux
- **Programming:** Python, JavaScript, SQL

RELEVANT PROJECTS

ForensiCloud - *In Progress*

- AI-based digital evidence encryption and forensics platform addressing tamper-proof evidence handling - direct exposure to data integrity and compliance requirements

UniScout - *in development*

- Mobile app centralizing campus events, opportunities, and announcements scattered across WhatsApp groups
- Solves a real problem for thousands of students who miss opportunities due to information overload

EclipsoAi | [DEMO](#)

- Built a sleek, modern AI chatbot interface - focused on clean UX and responsive frontend design Solves a real problem for thousands of students who miss opportunities due to information overload

Portfolio Website - NextJs | [DEMO](#)

- Designed and developed a personal portfolio site using Next.js with a modern, minimal aesthetic

EDUCATION

Bachelor of Science in Software Engineering

2023 - Present (8th Semester)

Sindh Madressatul Islam University, Karachi

- **Relevant coursework:** Computer Networks, Operating Systems, Distributed Systems concepts, Database Systems, OOP

LEADERSHIP & EXTRACURRICULARS

Aspire Leaders Program - Aspire Institute, Harvard

- Participating in leadership and professional development training.
- Engaging with a global network of ambitious students and mentors.
- Developing communication, collaboration, and problem-solving skills.

Nobel Ambassadors Pakistan - Pak Promo Team

- Became part of a global youth community focused on leadership, collaboration, and professional growth.
- Represented both self and the organization in webinars, discussions, and international virtual events.
- Developed public speaking, leadership, cross-cultural communication, and teamwork skills through active participation.

Google Developers Club (GDC) On Campus - Outreach Team

- Actively participated in developer-focused workshops, coding sessions, and collaborative tech events.
- Engaged with students and mentors to explore modern technologies including web development
